

1. Drought attenuates plant defence against bacterial pathogens by suppressing the expression of CBP60g/SARD1 during combined stress

<https://onlinelibrary.wiley.com/doi/full/10.1111/pce.14275>

2. Investigation of the novel transcriptional changes under combined drought and bacterial stress underpins the role of AtMYB96 in imparting tolerance

<https://link.springer.com/article/10.1007/s13562-021-00724-7>

3. Dry root rot of chickpea: A disease favored by drought

<https://apsjournals.apsnet.org/doi/full/10.1094/PDIS-07-21-1410-FE>

4. A sick plot–based protocol for dry root rot disease assessment in field-grown chickpea plants

<https://bsapubs.onlinelibrary.wiley.com/doi/full/10.1002/aps3.11445>

5. Low soil moisture predisposes field-grown chickpea plants to dry root rot disease: evidence from simulation modeling and correlation analysis

<https://www.nature.com/articles/s41598-021-85928-6>

6. CaProDH2-mediated modulation of proline metabolism confers tolerance to Ascochyta in chickpea under drought

<https://www.biorxiv.org/content/10.1101/2021.06.25.449950v1.abstract>

7. How much do we know about the threat of combined stresses in Indian agriculture?

<http://223.31.159.10:8080/jspui/handle/123456789/1203>

8. Role of Plant Kinases in Combined Stress

<https://onlinelibrary.wiley.com/doi/abs/10.1002/9781119541578.ch19>

9. An efficient, high-throughput method for the simultaneous exposure of drought stress and bacterial infection in plants

<https://bsapubs.onlinelibrary.wiley.com/doi/full/10.1002/aps3.11399>

10. ath-miR164c influences plant responses to the combined stress of drought and bacterial infection by regulating proline metabolism

<https://www.sciencedirect.com/science/article/pii/S0098847220300241>

11. Plant-pathogen interaction in the presence of abiotic stress: What do we know about plant responses?

<https://link.springer.com/article/10.1007/s40502-019-00483-7>

12. AtGBF3 confers tolerance to Arabidopsis thaliana against combined drought and Pseudomonas syringae stress

<https://www.sciencedirect.com/science/article/pii/S0098847219308998>

13. Impact of drought stress on simultaneously occurring pathogen infection in field-grown chickpea

<https://www.nature.com/articles/s41598-019-41463-z>

14. Morpho-Physiological Traits and Molecular Intricacies Associated with Tolerance to Combined Drought and Pathogen Stress in Plants

https://link.springer.com/chapter/10.1007/978-3-319-94746-4_4

15. Impact of Soil Moisture Regimes on Wilt Disease in Tomatoes: Current Understanding

<https://www.sciencedirect.com/science/article/pii/B978012813066700005X>

16. Transcriptome changes in *Arabidopsis thaliana* infected with *Pseudomonas syringae* during drought recovery

<https://www.nature.com/articles/s41598-017-09135-y>

17. Transcriptomic changes under combined drought and nonhost bacteria reveal novel and robust defenses in *Arabidopsis thaliana*

<https://www.sciencedirect.com/science/article/pii/S0098847217301090>

18. Global profiling of phytohormone dynamics during combined drought and pathogen stress in *Arabidopsis thaliana* reveals ABA and JA as major regulators

<https://www.nature.com/articles/s41598-017-03907-2>

19. Impact of Combined Abiotic and Biotic Stresses on Plant Growth and Avenues for Crop Improvement by Exploiting Physio-morphological Traits

<https://www.frontiersin.org/articles/10.3389/fpls.2017.00537/full>

20. Concurrent Drought Stress and Vascular Pathogen Infection Induce Common and Distinct Transcriptomic Responses in Chickpea

<https://www.frontiersin.org/articles/10.3389/fpls.2017.00333/full>

21. Plant Tolerance to Individual and Concurrent Stresses

<https://link.springer.com/book/10.1007/978-81-322-3706-8?noAccess=true>

22. Concurrent Stresses Are Perceived as New State of Stress by the Plants: Overview of Impact of Abiotic and Biotic Stress Combinations

https://link.springer.com/chapter/10.1007/978-81-322-3706-8_1

23. Understanding the Impact of Drought on Foliar and Xylem Invading Bacterial Pathogen Stress in Chickpea

<https://www.frontiersin.org/articles/10.3389/fpls.2016.00902/full>

24. Plant Responses to Combined Drought and Pathogen Infection: Current Understanding on the Role of Phytohormones

https://link.springer.com/chapter/10.1007/978-81-322-3706-8_9

25. Drought Stress Predominantly Endures *Arabidopsis thaliana* to *Pseudomonas syringae* Infection

<https://www.frontiersin.org/articles/10.3389/fpls.2016.00808/full>

26. Global Transcriptional Analysis Reveals Unique and Shared Responses in *Arabidopsis thaliana* Exposed to Combined Drought and Pathogen Stress

<https://www.frontiersin.org/articles/10.3389/fpls.2016.00686/full>

27. Tailored Responses to Simultaneous Drought Stress and Pathogen Infection in Plants

https://link.springer.com/chapter/10.1007/978-3-319-28899-4_18

28. Shared and unique responses of plants to multiple individual stresses and stress combinations: physiological and molecular mechanisms

<https://www.frontiersin.org/articles/10.3389/fpls.2015.00723/full>

29. Impact of Concurrent Drought Stress and Pathogen Infection on Plants

https://link.springer.com/chapter/10.1007/978-3-319-07899-1_10
